

SHOPPING BAG HOLDER AND CARRYING APPARATUS

ABSTRACT OF DISCLOSURE

Disclosed is a shopping bag handle that can be used with a
5 plurality of bags minimize discomfort to the person carrying the
bags. This minimization is accomplished through a design that
minimizes shock, prevents contact of the bags handle with the
hand of the person carrying the bags and further may use a back
of wrist stabilizing surface. When the handle is used with a
10 plurality of bags simultaneously, the chances of the contents of
the bags being disgorged while the bags are being transported in
a vehicle are greatly minimized.
